PREFACE

This report is in response to CIA requirement C-SI4-82,021 and GMAIC Deployment Working Group requirement 54-64 requesting mensuration and line drawings of the SKEAN missile and its transporter.

The mensural data contained in this report were obtained from photographic graphical solutions coupled with scaling and ratio techniques. Because of the geometrical problems involved in mensural analysis of oblique ground photography, some degree of error is inherent. The reader is cautioned that, while in many instances di-

██████████ photography taken in Moscow on 7 November 1964 revealed 5 surface-to-surface missiles, 4 of which were actually paraded, believed to be the SS-5 IRBM and assigned the ██████████ designator SKLEAN (Figure 1). The numerical designations 0128604, 0128691, 1137721, 1143148, and 2144356 were visible on the missiles. Dimensional drawings and additional photography of the missiles are shown in Figures 2 through 7.

The SKLEAN missile is a single-stage vehicle with a cylindrical, straight-through configuration having a flared tail section and a well-rounded conical, blunted nose. There are no fins on the missile. A raised channel runs

the length of the body, beginning just behind the nose section, and terminating at the beginning of the tail flare. The length of the missile from the nose to the end of the flared tail section is ██████████. The length of the missile including the holddown apparatus at the tail is ██████████. The diameter of the missile increases from ██████████ at the nose to ██████████ feet at the tail, with the diameter of the cylindrical, main-body portion being ██████████. There is a cover plug at the rear of the missile concealing engine details.

The missile is carried on a double-axle, 8-wheeled, transporter trailer having a length of ██████████ and a wheelbase of ██████████. The

missile is held on the trailer by a tiedown band around the forward section and turnbuckles attached to a stud at the rear. The trailer has 2 extensions at the rear which suggest that it is used as a cradle during erection of the missile. When the missile is on the transporter the maximum height above ground level is [REDACTED]. The trailer was towed by a new unidentified 8-

wheeled tractor vehicle [REDACTED] long with a height at the top of the cab of [REDACTED]. The cab and engine compartment are [REDACTED] long followed by a canvas covered section [REDACTED] long. The wheelbase of the tractor is [REDACTED]. The tractor and the trailer are connected by a towbar [REDACTED] long. The overall length of tractor and transporter trailer is [REDACTED].
